

Complete each problem about each arithmetic sequence/series or geometric sequence/series.

Must show your work to receive credit!!

<p>1.) Find the 20th term for the arithmetic sequence in which $a_1 = 3$ and $d = 7$.</p> $a_{20} = 136$	<p>2.) If the 15th term for an arithmetic sequence is -76 and the common difference is -6, then find the fifth term.</p> $a_5 = -16$	<p>3.) Which term of the arithmetic sequence $5, 8, 11, \dots$ is 128?</p> <p>42nd term</p>
<p>4.) The eighteenth term is 56 and the twenty-seventh term is 92 for an arithmetic sequence, what is the eight term?</p> $a_8 = 16$	<p>5.) Find the two arithmetic means between 4 and 22.</p> <p>10, 16</p>	<p>6.) Find the sum for an arithmetic series in which $a_1 = 3$, $d = 0.48$, and $a_{26} = 15$.</p> $S_{26} = 234$
<p>7.) If $S_{19} = -760$ and $a_1 = 14$, then find the common difference.</p> $d = -6$	<p>8.) If the sum of an arithmetic series with 24 terms is 1872 and the last term in the series is 147, then find the first term of the series.</p> $a_1 = 9$	<p>9.) Find sum using any method:</p> <p>a.) $\sum_{n=3}^6 4n + 5$ $S_4 =$</p> <p>b.) $\sum_{n=2}^7 5(-4)^{n-1}$ $S_6 =$</p> <p>c.) $\sum_{n=1}^{\infty} 20\left(-\frac{3}{2}\right)^{n-1}$ DNE</p>
<p>10.) Find the 6th term of the geometric sequence for which $a_1 = 4$ and $r = -2$.</p> $a_6 = -128$	<p>11.) If the seventh term of a geometric sequence is 3,645 and the common ratio is 3, then find the first term.</p> $a_1 = 5$	<p>12.) If the third term in a geometric sequence is $\frac{23}{2}$ and the sixth term is $-\frac{23}{16}$, then find the first term.</p> $a_1 = 46$

13.) Find the four geometric means between 5 and 1,215.

15, 45, 135, 405

14.) Find the sum of the (finite) geometric series $128 - 64 + 32 - \dots$ to 8 terms.

$$S_8 = 85$$

15.) If $S_n = 5,115$, $r = 2$, and $a_1 = 5$, then find the number of terms of the (finite) geometric series.

$$n = 10$$

16.) Find the common ratio for an infinite geometric series in which $a_1 = 6$ and $S = 18$.

$$r = \frac{2}{3}$$

17.) Find the sum (if it exists) for an infinite geometric series

$$4 + 3 + \frac{9}{4} + \dots$$

$$S = 16$$

18.) Write the following repeating decimal as a fraction: $0.648484848\dots$

$$S = \frac{107}{165}$$

19.) Find the fifth term of the sequence in which $a_1 = 4$ and $a_{n+1} = 4a_n + 6$.

$$a_5 = 1534$$

20.) Find the third iterate of $f(x) = 3x - 5$ for an initial value of $x_0 = 2$.

$$x_3 = -11$$

21.) What is the twelfth term of the Fibonacci sequence?

$$a_{12} = 144$$

22.) The grocery store manager, Mr. Whipple, asked George to make a pyramid display of cans of chicken soup that came in the last shipment. George stacked 76 cans on the bottom. By removing two cans from each end, there are only eight cans left for the top row. If we start counting the rows of cans at the bottom, how many cans are in the eleventh row?

36 cans

23.) A researcher placed four single celled organisms in a laboratory petri dish. Overnight, each cell split into two; the next night each of those cells split into two, etc. Assuming no deaths, after how many weeks will the petri dish have 4,194,304 organisms?

3 weeks

24.) A rubber ball is dropped from 36 ft. It rebounds to a height of 60% of the drop where this process continues infinitely. What is the ball's total vertical distance?

144 ft

25.) The Dawn family is taking out a mortgage loan for \$180,000 to buy a house. Their monthly payment is \$878.79. The recursive formula is $a_n = (1.004375 \cdot a_{n-1}) - 878.79$ which describes the balance left on the loan after n payments. Find the balance of the loan after the fourth payment.

\$ 179,632.44
